SPLITTERS

Line Splitter for Voice and Data

- MUST BE USED IN PAIRS
- This will allow one UTP outlet to have a LAN outlet and a telephone outlet
- Scenario - you have one RJ45 outlet in your office, which goes back to a patch panel. By installing a splitter at each end, you can patch LAN and voice over the single four pair cable, by using the redundant pairs
- They are generally used when running another UTP cable is not an option, or for temporary installations
